

ROLAND FR-4X PROGRAMMING BY RICHARD NOEL

I provide a complete collection of User Programs, several sets, and descriptions of all user programs and sets. I use the Alpine and AccOrchestra expansions, free from the Roland 4x Download site, as well as the Balkan expansion that is typically already on your 4x. The price for my complete collection is \$150, including whatever assistance is needed. Unless otherwise arranged, all items are sent by email attachment.

Email me directly at Bakersfieldaccordion@gmail.com for more information. I will respond promptly. We can discuss, prior to your ordering, whether my programming will meet your needs. With your order (see below) you will receive additional instructions about how to load the files as well as detailed descriptions of the programming.

USER PROGRAMS

There are 7 User Program Banks, each Bank with 14 registers, for a total of 98 User Programs. Within each bank there is an "A" or "B" side, access by the A/B button on the grille. The User Programs are organized in several ways to facilitate ease of use:

1. By Style of Music (e.g., Foxtrot, Polka, Latin, Jazz, Country, Rock, Orchestral, Accordion).
2. By specific songs.

This approach allows you to create an enormous variety of music by selecting different user programs within each style, varying parts within user programs, and by exiting user programs to take advantage of many more options from the originating sets.

SET 100_NOELBASE, SET 099_NOELCELT, SET 098_POLKAFIXEDBASS, SET 097_CLASSICAL, SET 096_CORDOVOX

These sets are the basic building blocks for most user programs. You can always play music within the Set Mode if desired, but I personally prefer the efficiency and accuracy of the User Programs. If you play lots of polkas, you may want to use Set 98, especially if you like to play with fixed basses and chords. This set gives you more possibilities than available within a user program bank.
